

Ideas Laboratory "Green AI"

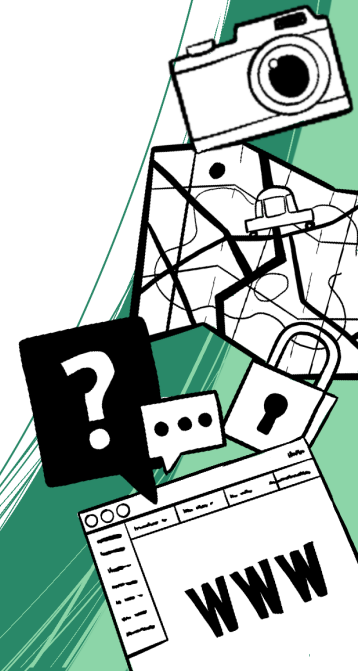

Interreg 
Austria-Hungary 2014-2020
European Union – European Regional Development Fund

Brainstorming

Talk about the **environmentally friendly measures** you have collected and **practical examples of environmentally friendly AI applications** in your teams

Make a **top 3 list** and finally decide on an area or a problem for which you want to develop a program / app yourself

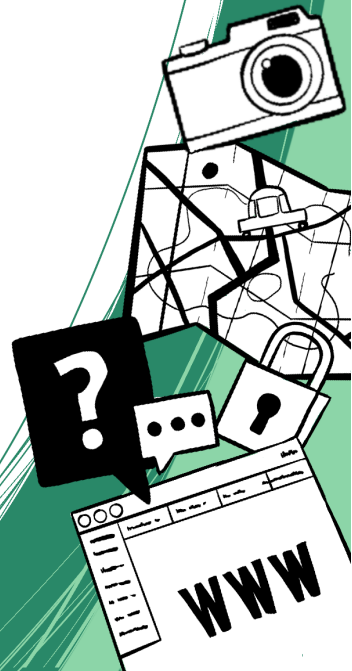

Specification

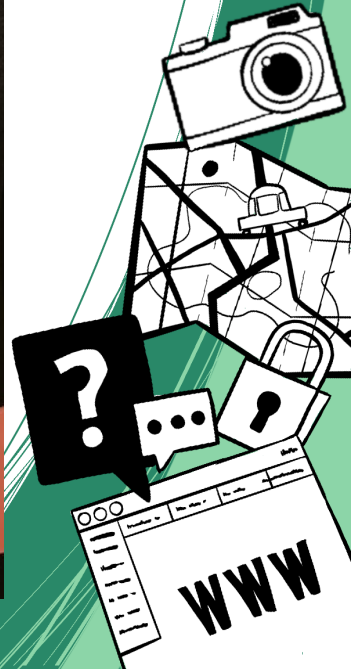

Think about what exactly the **goal** of your application should be and what functions it should be able to do. Write down all the points to consider.

- What is the goal of your app? What exactly should she do? How can the idea work?
- How will you make your app appealing to your users?
- What do you set out to do? What problem do you want your app to help solve?

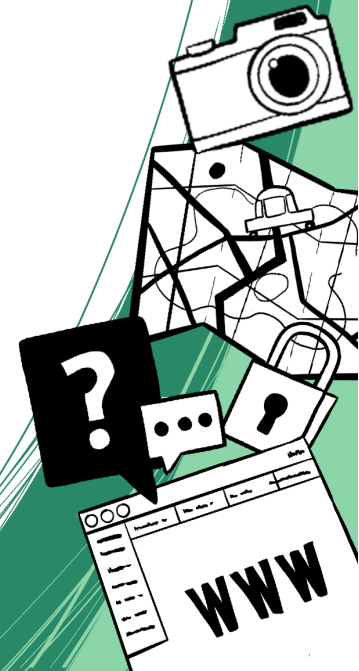

Design

Think of a **project name**, design a **logo** and make **sketches** of what the program could look like.

Presentation at the World Café

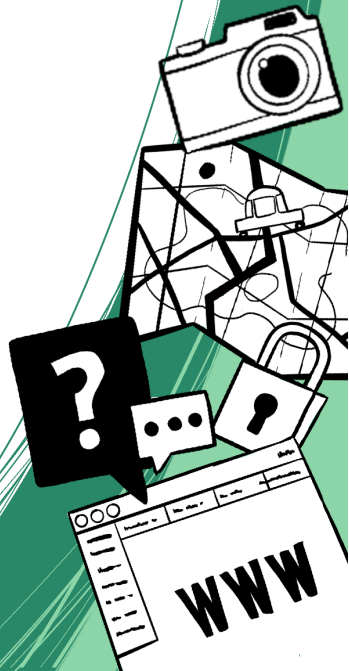

- A group member remains at your table as a **moderator**.
- The other group members sit down at the table of **another project group** for the given time
- Talk about the project at the table, give **feedback**, ask questions, make sketches and suggestions on the papers

Overwork

Discuss the **collected feedback** for your project and consider which of the suggestions you want to **include** in your project and how.

Final presentation

- Choose **one or two speakers** and present your projects in plenary
- Explain **your idea**, where there were **difficulties**, which **feedback** you included and which you did not include (also why you did not include some things).
